**Information and registration:** [info@medeq.ee](mailto:info@medeq.ee), +372 5822 9398, +372 622 8111

### **Course Objectives:**

Deep explanation to orthodontists, prosthodontists, general practitioners and dental students to the most complete cephalometric analysis available. Understand the interaction between occlusion and bones / jaws position. Extremely useful for your case treatment planning when repositioning the mandible is necessary.

### **Course design:**

- Ricketts Lateral Cephalometric Analysis
- Points and general aspects of osteology
- Ricketts studies and analysis origin
- Polar growth phenomenon
- Cranial base study
- Total facial height / Face typology
- Lower facial height and teeth position
- Inter Incisor angulation
- Xi point and the Occlusal plane
- Facial axis / Convexity
- Mandibular arc / Corpus axis
- The role of pm point
- Interrelation of all factors
- Interpretation

### **Practice:**

- Students' cases analysis with computer software

**We kindly ask the students to bring a PC Windows based laptop and digital lateral radiographs.**

- Cases presentation
